EDUCATION

B.Tech - Computer Science Engineering (Cybersecurity & Digital Forensics),
VIT Bhopal University

2022 – 2026
Madhya Pradesh

CERTIFICATIONS

- Certified Ethical Hacker (CEH v13)- in progress
- Cyber Security Analyst - IBM
- DevOps, Agile & Design Thinking - IBM
- Cyber Physical Systems - NPTEL
- DevOps Fundamentals - IBM
- Python Certification - Vityarthi

Technical Skills

Programming Languages: Python, Java, C

Web & Backend Development: HTML, CSS, JavaScript, React.js, Node.js, REST APIs

Cybersecurity & Tools: Penetration Testing, Vulnerability Assessment, Wireshark, Nmap, Burp Suite, Metasploit

Machine Learning & Data Science: Scikit-learn, Qiskit, Deep Q-Networks (DQN), Hyperparameter Tuning, Model Optimization

Developer Tools & Platforms: Git, GitHub, Linux, Windows, ShellGPT

Core Computer Science Fundamentals: Data Structures & Algorithms, Operating Systems, DBMS, Computer Networks

PROJECTS

Quantum-Enhanced Reinforcement Learning for Autonomous Cyber Defence

- Developed a hybrid Quantum-Classical Deep Q-Network (QDQN) for threat detection
- Integrated Qiskit with reinforcement learning for advanced cyber defense modeling
- Achieved ~50% improvement in detection accuracy over baseline models
- Designed scalable architecture for multi-class threat classification
- Evaluated trade-offs between quantum computational cost and performance

Advanced Network Intrusion Detection System (ML-Based)

- Built ML-based IDS using NSL-KDD dataset for real-time threat detection
- Reduced false positives through hyperparameter tuning and model optimization
- Implemented alert system for proactive network monitoring

Rule-Based Network Intrusion Detection System

- Developed signature-based IDS for monitoring suspicious traffic
- Analyzed attack patterns to improve detection rules

Phishing Link Detection System

- Designed rule-based system to identify malicious URLs
- Improved detection accuracy using heuristic-based filtering techniques

INTERNSHIP EXPERIENCE

Cyber Security Engineer Intern , <i>SmartKnower</i>	01/2023 – 03/2023
• Performed vulnerability assessments and penetration testing on web applications • Analyzed network traffic to detect anomalies and potential threats • Applied ethical hacking techniques to strengthen system security • Gained hands-on experience with real-world cybersecurity tools and methodologies	Remote

WORK EXPERIENCE

Technical Officer (Part-Time, Hybrid) , <i>Celestial Sphere Mentoring</i>	04/2024 – 05/2025
• Handled day-to-day technical operations and ensured smooth system workflows • Supported backend work, including basic API handling and issue resolution • Assisted in security checks and testing activities when required • Used tools like ShellGPT to automate small tasks and help with troubleshooting • Worked closely with the team to resolve issues and maintain system stability	Remote
